

Introduction to Mathematical Physics & Classical Mechanics
Major Course I (MJC-1)

Course Title	Credit	Credit Distribution	
		Theory	Practical
Introduction to Mathematical Physics & Classical Mechanics	6	4	2

Course Outcomes

After completion of the course, the student will be able to-

CO 1- Understand various mathematical techniques used in Physical Problems. Know the difference between Newtonian Mechanics and Analytic Mechanics.

CO 2- Understand utility of scalars and vectors and their operations- algebraic and D-operator

CO 3- Understand the concept of Pseudo force and its importance with application in real life situations.

CO 4- Revise the idea of centre of Mass and Laboratory frame.

CO 5- Understand the orbit of communication and Remote sensing satellite.

MJC -1(T)-4 Credit**Unit I-Concept of Differentiation & Integration-****01 Credit (15 hrs)**

Differential calculus: Geometric Meaning of derivative; Maxima & Minima, Approximation of derivative; Partial Differentiation, Approximation using Taylor and Binomial series.

Integral Calculus: Geometric Meaning of integration, order and degree of differential equation, Solution of First order (homogeneous & Non-homogeneous), Integrating Factor, Exact and Inexact Differentials, D-operator & Solution of Second order Differential Equation.

Unit II-Vector Algebra & Vector Calculus-**01 Credit (15 hrs)**

Vector: Triple Products & their significance; concept of scalar & vector fields, Gradient of scalar, Divergence & Curl of vectors and their physical applications in Physics (e.g. Equation of continuity, Euler's equation of motion, Bernoulli's theorem, Fourier heat flow, Poisson's and Laplace's equation in a gravitational field, Gauss's law of in Electrostatics, etc.).

Unit III- Fundamentals of Dynamics -**01 Credit (15 hrs)**

Inertial and Non-inertial Frame of Reference, Rotating frame of Reference, Centrifugal and Coriolis Forces with their applications (Effect on value of 'g', On path of freely falling body, Geo- physical effects), Foucault pendulum, Direct proof of rotation of Earth.

Unit IV- Centre-of- Mass Frame and Central Forces**01 Credit (15 hrs)**

Lab frame & Centre of Mass frame, Two dimensional collision in physical problems, Relation connecting Scattering angle, Recoil angle, final velocities in C-frame & L-frame, Cross section & Rutherford scattering, Central forces and their equations; General Equation of central orbit, Kepler's law of Planetary motion, Artificial satellite.

MIC -I(P)-2 Credit

The theory involved in the prescribed practical should be discussed in class and students should be made familiar with associated concepts.

At least 6 experiments must be performed-

1. Elementary measuring apparatus - Use of Vernier calliper, Screw gauge and Spherometer.
2. To determine least Count of (i) Travelling Microscope (ii) Spectrometer (iii) Polarizer.
3. To Evaluate value of "g" using Bar Pendulum
4. To Evaluate value of "g" using Kater's Pendulum
5. To Verify Conservation of linear Momentum using curved track apparatus.
6. To Determine Young's modulus of Elasticity by Flexure of Beam
7. To Determine Elastic constants for the material of a wire by Searle's method
8. To Determine Surface Tension by method of ripples/use of Capillary tube
9. To Determine Co-efficient of Viscosity of liquid by Stokes method/Poiseuille's method of flow of water through Capillary.
10. To study the motion of spring-mass system and to evaluate spring constant/value of μ .
11. To evaluate average error, standard deviation, and percentage error in measurement of focal length of a concave mirror/Convex lens.

The CIA examination in Practical should be just as Mock test and it must be on the Pattern of proper Hrs End-semester Examination.

Sl. No.	Component	CIA	End-Semester
1	Experiment Allotted	15	45
2	Continuous Practical Record	05	10
3	Viva-Voce	10	13
		30	70
Total = 100 Marks			

Suggested Books :

1. Advanced Practical Physics for students, B.L.Filar and H.T.Worrap, 1971, Asia Publishing House
2. A Text Book of Practical Physics, I.Praakash Ramakrishnan, 11th Ed., 2011, Kitab Mahal
3. Advanced level Physics Practical, Michael Nelson and Jon M. Osborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
4. A Laboratory Manual of Physics for undergraduate classes, D.P.Khandelwal, 1985, Vanl Pub.
5. Properties of Matter- D. S. Mathur

Major Course II (MJC-2)

Course Title	Credit	Credit Distribution	
		Theory	Practical
Oscillations and Waves	6	4	2

Oscillations and Waves

Course Outcomes

After completion of the course, the student will be able to-

CO-1-understand the concept of Periodic and Oscillatory trends with application of free, Damped and Forced Oscillation in Physical Situation.

CO2-learn application of Lissajou Figure in different Physical Problems.

CO3-explore the working of various Musical Instrument.

CO4-understand the Physics behind Acoustic of Building.

CO5-know the technique of sound Recording and Reproduction.

MJC -II(T)-4 Credit

Unit I :- Basics of Oscillations

01 Credit (15 hrs)

Idea of S.H.M., its differential equation and solutions, Energy in S.H.M, Two body oscillation, coupled Pendulum Normal modes of vibration, Compound Pendulum, Free, Damped and Forced Oscillations, Transient and steady state, Electrical Oscillations Resonance: Sharpness of Resonance and Quality factor.

Unit II :- Superposition of Oscillations

01 Credit (15 hrs)

Addition of two S.H.Ms: Concept of Lissajou Figure, its Geometrical Composition & Application, Stationary waves as combination of oscillations (Waves in a linear bounded medium), Vibration of string and Sonometer.

Unit III :- Wave Motion

01 Credit (15 hrs)

Wave front, Equation of Wave Motion, Superposition of two (harmonic waves) : Interference, Beats & combination of tones, pressure, energy and intensity in wave propagation, musical instruments.

Unit IV :- Sound Waves

01 Credit (15 hrs)

Sound wave: Propagation and speed of sound (Acoustic) waves in media, speed in air; Newton's formula & Laplace Correction, Characteristics of Musical sounds & their analysis, Musical scale & consonance, Sound recording and reproduction, Acoustic of Buildings.

Suggested Books :

1. Waves & Oscillation- H. S. Agrawal
2. Waves & Oscillation- Deygri & Dhanacharya
3. The Physics of Vibrations and Waves, H. J. Pain, John Wiley & Sons Ltd.
4. The Physics of Waves and Oscillations, N.K. Biju, 1998, Tata McGraw Hill
5. Waves and Oscillations, N Subramanyam, Bri Lal, Vikas Publishing House Pvt Ltd.
6. Theory of Vibration- W. T. Thomson
7. A Textbook of Sound- D.R. Khanna & R.S. Beri.

Oscillations and Waves

The theory involved in the prescribed practical should be discussed in class and students should be made familiar with associated concepts.

At least 6 experiments must be performed:-

- 1- To determine frequency of Tuning Fork using Sonometer / verify laws of transverse vibration of stretched string
- 2- To determine frequency of Tuning Fork using Electrically maintained Meissle's apparatus
- 3- To determine the frequency of A. C. Mains using a sonometer and an electromagnet.
- 4- To Find the Speed of sound in the materials of given rod with a Kund's tube / Quincke's tube.
- 5- To determine Speed of Ultrasonic waves in any given liquid (e.g. Kerosene)
- 6- To study motion of Spring – Mass System.
- 7- To study the directional characteristic of Microphone using signal Generator, Amplifier, microphone, multimeter & C.R.O.
- 8- To determine the damping constant, relaxation time and quality factor of damped mechanical oscillator using simple Pendulum with bobs of different material (Aluminium, Brass, Wood etc.)
- 9- To determine torsional constant using Torsional Pendulum.
- 10- To determine speed of sound using Resonance column Apparatus.

The CIA examination in Practical should be just as Mock test and it must be on the Pattern of proper Mrs Test- structure Examination.

3	Zeroth and First Law of Thermodynamics Extensive and intensive Thermodynamic Variables, Thermodynamic Equilibrium, Zeroth Law of Thermodynamics and Concept of Temperature, Work, Heat, State Functions and path functions, First Law of Thermodynamics, Internal Energy for ideal and real gases, Applications of First Law of thermodynamics in case of thin film, stretched wire, hydrostatics, and specific Molar Heat Capacity for gases, Relation between C_p and C_v .	09
4	Second Law of Thermodynamics Cyclic reversible and irreversible process, Carnot engine, Carnot cycle, Second Law of thermodynamics, Principle of heat engine and refrigerator Kelvin-Planck and Clausius Statements, Concept of Entropy, Clausius Inequality, Second Law in terms of Entropy, Temperature-Entropy diagrams, Third Law of thermodynamics, Thermodynamic Potentials: Internal Energy, Enthalpy, Helmholtz & Gibbs Functions, Maxwell's Relations, Co-efficient of performance, Clausius-Clapeyron equation and phase transition (1 st and 2 nd order)	15
TOTAL		48

MJCPHY03: Thermal Physics & Thermodynamics (P)- 02 Credit

1.	To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow method.
2.	To determine the Coefficient of Thermal Conductivity of good conductor (C_c) by Rowle's Apparatus.
3.	To determine the Coefficient of Thermal Conductivity of good conductor (C_c) by Angstrom's Method.
4.	To determine the Coefficient of Thermal Conductivity of a bad conductor by Lee and Charis's disc method.
5.	To determine the Temperature Coefficient of Resistance by Platinum Resistance Thermometer (PRT).
6.	To study the variation of Thermo-EMF of a Thermocouple with difference of Temperature of its two Junctions using a null method.
7.	To determine Mechanical Equivalent of Heat (J) with the help of Joule's calorimeter.
8.	To plot a graph between temperature and pressure at constant volume using Joly's apparatus and to find the coefficient of increase of pressure at constant volume.
9.	To study the adiabatic expansion of a gas and hence to find the value of the ratio of specific heat at constant pressure to specific heat at constant volume for air using Clement and Desormes's apparatus.

Suggested Readings :

1. Thermal Physics - S. Garg, R. Bansal and C. Gosh (Tata McGraw-Hill)
2. Heat and Thermodynamics - M.W. Zemansky, Richard Dittman (McGraw-Hill)
3. A Treatise on Heat - Meghead Saha, and B.N. Srivastava (Indian Press)
4. Classical and Quantum Thermal Physics - R. Peard (Cambridge University Press)
5. Modern Thermodynamics with Statistical Mechanics - Carl S. Hellrich (Springer)
6. Thermodynamics, Kinetic Theory & Statistical Thermodynamics - Sears & Salinger (Norton)
7. Concepts in Thermal Physics - S.J. Bhadani and K.M. Bhadani (University Press)

SEMESTER-IIIMJCPHY-04: Electricity & Magnetism

Course Title	Credit	Credit Distribution	
		Theory	Practical
Electricity and Magnetism	4	3	1

Course Outcomes

After the completion of the course, the student will be able to:

- CO1: Understand the basic concepts of electrostatics.
 CO2: Understand the dielectric and magnetic properties of matter.
 CO3: Understand the electromagnetic induction and electric circuits.
 CO4: Provides background for further studies and research in different subject areas.

MJCPHY03: Thermal Physics & Thermodynamics (T) - 03 Credit

Unit	Topics to be covered	No. of Lectures
1	Electrostatics: Electric Field and potential, Field due to a uniformly charged sphere, Gauss Law and its applications: The Field of a conductor, Electric dipole, Field and potential due to an electric dipole, Dipole approximation for an arbitrary charged distribution, Electric quadrupole, Field due to a quadrupole, Electrostatic Energy of a uniformly charged sphere, Poisson and Laplace Equations, applications of Laplace equation.	10
2	Dielectric Properties of Matter: Electric field in matter and Electrical susceptibility and Dielectric polarization, Dielectric constant, Polarisation vector, Surface Charge and bound charge, Displacement Vector D , Relations between K , P and D .	08
3	Magnetism: Magnetic field, Magnetic force and Torque on a current carrying conductor, and loop placed in a magnetic field, Biot - Savart's Law and its simple applications: straight wire and circular loop, Magnetic Dipole, Magnetomotive force and Ampere's Circuital theorem and its application to calculate magnetic field due to current carrying wire and solenoid and toroid. Gauss's law of magnetism (Integral and Differential Forms), Relative Permeability of a Material, Magnetic Susceptibility, Magnetization Vector (for intensity of magnetisation, Magnetic Intensity (H)) Relation between B , I and H , Magnetic Energy stored in Matter, Magnetic Circuit, Potential Energy of a Current Loop placed in a magnetic field, Ballistic Galvanometer, Electromagnetic Damping, Logarithmic Damping, Critical Damping Resistance (CDR)	12

4	Electromagnetic Induction: Faraday's and Lenz's Laws, Mutual and Self Induction, self and Mutual Inductances of a solenoid and system of current carrying loop, Energy stored in a Magnetic Field, Electric field induced due to time varying Magnetic field, magnetic field induced due to Time varying electric field, Introduction to Maxwell's Equations	05
5	Electrical Circuits: AC Circuits: Kirchhoff's laws for AC circuits, Resistance and Complex Impedance, Series and parallel LCR Circuit: Resonance, Quality Factor, and Band Width, Power in AC Circuits	10
	Total	45

MJCPHY- 04: Electricity & Magnetism (P) - 02 Credit

- Use of Multimeter for measuring (a) Resistance, (b) AC and DC Voltages, (c) DC Current, (d) Capacitance, and (e) Checking electrical fuses.
- To calibrate the ammeter and voltmeter by potentiometer.
- To find the low resistance by Carey Foster's bridge after calibrating the bridge wire.
- Measurement of low resistance using Potentiometer.
- To determine the high resistance by leakage method.
- Figure of merit of moving coil galvanometer.
- To determine the angle of dip in the laboratory using an earth inductor.
- Compare the capacities of capacitors by De Sauty' bridge.
- To study the characteristics of a series RC Circuit.
- To verify the Thevenin and Norton theorems.
- To verify the Superposition, and Maximum power transfer theorems.
- To determine self inductance of a coil by Anderson's bridge.
- To study the response curve of a Series LCR circuit and determine its (a) Resonant frequency, (b) Impedance at resonance, (c) Quality factor Q, and (d) Band width.
- To study the response curve of a parallel LCR circuit and determine its (a) Anti-resonant frequency and (b) Quality factor Q.

Suggested Books :

MJCPHY05: Mathematical Physics-II and Introduction to Computational Methods

Course Title	Credit	Credit Distribution	
		Theory	Practical
Mathematical Physics-II and Introduction to Computational Methods	5	3	2

Course Outcomes

After the completion of the course, the student will be able to:

- CO1: Master the basic elements of complex mathematical analysis.
- CO2: Solve differential equations that are common in physical sciences.
- CO3: Apply group theory and integral transforms to solve mathematical problems of interest in Physics.
- CO4: Understanding how to use special functions in various physics problems.
- CO5: Provides background for further studies and research in different subject areas.

MJCPHY05 Mathematical Physics and Introduction to Computational Methods (T)-03 Credit		
Unit	Topics to be covered	No. of Lectures
1	Curvilinear Coordinates, Tensors and special functions Spherical and Cylindrical Coordinate Systems. Ordinary Integrals of Vectors, Line, surface and volume integrals of Vector fields. Tensors : Elementary properties, Contra variant and covariant tensors, Symmetric and Anti-symmetric tensors. Singular Points of Second Order Linear Differential Equations and their importance, Frobenius method and its applications to differential equations Lagrange, Bessel, Hermite and Laguerre Differential Equations.	09
2	Partial Differential Equations and Complex Analysis : Solutions to partial differential equations using separation of variables Laplace's Equation in problems of rectangular, cylindrical and spherical symmetry. Complex Numbers Graphical Representation Euler's formula, De Moivre's theorem, Roots of Complex Numbers. Functions of Complex Variables. Analyticity and Cauchy-Riemann Conditions Cauchy's inequality, Cauchy's integral formula. Simply and multiply connected region. Integration of function of a complex variable.	08
3	Introduction : Importance of Computers in Physics, Algorithms and Flow Charts : Algorithm Definition, properties and development. Flowchart: concept of flowchart, symbols, guidelines, types. Sum of two matrices, sum & Products of a finite series, calculations of $\sin(x)$ as a series.	06
4	Scientific Programming : Usage of Linux as Editor, some fundamental Linux commands (Internal & External commands) Development of FORTRAN, Basic elements of FORTRAN : Character set, constants and their types, variables and their types, Keywords, variable Declaration and concept of instruction and program. Operates : Arithmetic, Relational, Logical and Assignment operators. Expressions : Arithmetic Relational, Logical, Character and Assignment Expressions. FORTRAN Statements: IO statements	06

	(unformatted/formatted). Executable and Non-Executable statements, Layout of FORTRAN program, Format of writing program and concept of coding.	
5	Control statements : Types of Logic (sequential, selection, Repetitive), Branching statements (Logical IF, Arithmetic IF, Block IF , Nested Block IF, SELEC CASE and ELSE IF Ladder Statements), Looping statements (DO, CONTINUE, DO-ENDDO, DO-WHILE, Implied and Nested DO Loops), Jumping statements (Unconditional GO TO , computed GO TO, Assigned GO TO), Subscripted variables, Functions and Subroutines (Arithmetic statements, Function, Function subprogram and subroutines), Examples from physics Problems.	09
	Total	40

MJCPHY05	Mathematical Physics and Introduction to Computational Methods (P) 42 Credit
1.	Errors & error Analysis: Truncation & rounding of errors, absolute & relative errors.
2.	Differential equations: Solutions of ordinary differential equation, solution of first order differential equation, solution of quadratic equation.
3.	Computer Architecture and Organization, Memory and Input/Output devices.
4.	Basics of Scientific computing : Binary and decimal arithmetic, Floating point numbers, Algorithms, Single & Double precision arithmetic, underflow & overflow.
5.	Programs : Sum & average of a list of numbers, Largest of a given list of numbers and its location in the list, Sorting of numbers in ascending/descending order, Familiarity with DOS commands, Linux Commands and FORTRAN constructs.

Suggested Readings :

1. An Introduction to Computational Physics : T. Pang (Cambridge University Press)
2. Elementary Numerical Analysis : K.E Atkinson (Wiley India Edition)
3. Numerical Recipes in C : The Art of Scientific Computing, W.H. Press et al (Cambridge University)
4. Introduction to Numerical Analysis : S. S. Sastry
5. Mathematical Methods for Physicists : Arfken, Weber (Pub. Elsevier)
6. Mathematics for Physicists : Susan M. Lea (Pub. Thomson Books)

Semester IV
MJCPHY06: Electrodynamics and Electromagnetism

Course Title	Credit	Credit Distribution	
		Theory	Practical
Electrodynamics and Electromagnetism	5	5	0

Course Outcomes

After completing the course, the students will be able to:

- CO1: Establish and analyse four Maxwell's equations of electromagnetism.
- CO2: Understand the propagation of electromagnetic waves in vacuum, dielectrics, conductors and also in guided media and the phenomenon of reflection and refraction of plane waves at different boundaries.
- CO3: Understand the importance of energy flow (Poynting Theorem) and its usefulness.
- CO4: Get background for further studies and research in different subject areas.

MJCPHY06 Electrodynamics and Electromagnetism (T) - 05 Credit		
Unit	Topics to be covered	No. of Lectures
1	Maxwell's Equations: equation of continuity, Displacement Current Maxwell's equations in differential and integral forms; Vector and scalar potentials, Poynting theorem and Poynting vector, energy conservation (qualitative idea of momentum conservation), Electromagnetic (EM) Energy Density, Physical Concept of Electromagnetic Field Energy Density, Momentum Density, Description of Lorentz force.	10
2	Electromagnetic Wave Propagation in unbounded media: Propagation of plane EM waves in free space, and dielectrics, Transverse nature of plane EM waves, refractive index and dielectric constant, wave impedance. Propagation of EM wave through conducting media, relaxation time, skin depth.	14
3	EM Wave Propagation in Bounded Media: Boundary conditions at a plane interface between two media. Reflection and Refraction of plane waves at plane interface between two dielectric media — Laws of Reflection and Refraction, Fresnel's Formulae for perpendicular & parallel polarization cases, Brewster's law, Reflection & Transmission coefficients, Total internal reflection, Metallic reflection (normal incidence).	14
4	Polarization of Electromagnetic Waves: Description of Linear, Circular and Elliptical Polarization. Uniaxial and Biaxial Crystals. Light Propagation in Uniaxial Crystal. Double Refraction. Polarization by Double Refraction.	10

MJCPHY07:

Optics

Course Title	Credit	Credit Distribution	
		Theory	Practical
Optics	5	3	2

Course Outcomes

After the completion of the course, the student will be able to:

- CO1: Understand Interference as superposition of waves from coherent sources derived from same parent source.
 CO2: Demonstrate basic concepts of Diffraction: Superposition of wavelets diffracted from aperture.
 CO3: Understand Fraunhofer and Fresnel Diffraction.
 CO4: Gain experience of using various optical instruments and making their measurements of wavelength of light using Newton's Rings experiment, Fresnel Biprism, etc.
 CO5: Get background for further studies and research in different subject areas.

MJCPHY 7		Optics (T) - 3 credit
Unit	Topics to be covered	No. of Lectures
1	Interference: Light as EM Wave (Historical Perspective), Superposition of waves, Conditions for interference, Interference by Division of Wavefront (Fresnel's Biprism, Lloyd's single mirror) and by Division of Amplitude (Interference by Film), Newton's Ring, Complex Representation for Intensity calculation, Stoke's treatment.	12
2	Interferometer: Michelson Interferometer and its applications, Multiple beam interference in parallel film, Fabry-Perot Interferometer, Coherence - Spatial and Temporal.	08
3	Fraunhofer Diffraction: Conditions for diffraction, Fraunhofer diffraction due to single, double and multiple slits, Plane transmission grating. Fresnel diffraction: Fresnel half-period zones, Zone plate, Huygen's-Fresnel principle, Diffraction by a circular aperture, Diffraction by a straight edge, Rayleigh's criterion for limit of resolution, Resolving power of Grating, Telescope and Microscope.	12
4	Polarization and Double Refraction: Polarized light and its mathematical representation, Production of polarized light by reflection, refraction and scattering, Polarization by double refraction, Nicol prism, Quarter wave plate, Half wave plate, Babinet's compensator, Production and analysis of circularly and elliptically polarized light, Optical activity and Fresnel's theory, Ni-quartz polarimeter. Elementary ideas of LASERs, Einstein's A & B coefficients, Population Inversion and Holography.	13

1. To determine Magnifying Power of a telescope by the Sun method. Linear Scale using Microscope.
2. To find the height of an inaccessible object (altitude or angular diameter of the Sun) using Sextant.
3. To find angle of prism/ angle of minimum deviation and hence refractive index of material of prism using Spectrometer.
4. To find value of Cauchy's Constant A and B for the material of a given prism using a Mercury Vapour Lamp.
5. To determine Resolving Power of a prism.
6. To determine diameter of a thin wire by studying the diffraction (and interference) pattern.
7. To determine wavelength of sodium light using a plane diffraction grating.
8. To determine Resolving Power of a plane transmission grating.
9. To establish the dispersion relation for a plane transmission grating.
10. To verify Fermat's Law of reflection and refraction by using a plane refracting surface.
11. Simple experiments demonstrating different applications of LASER and Optical Fiber.
12. Determination of wavelength of light using gratings on optical bench.
13. To determine the wavelength of the monochromatic light by Newton's Ring.
14. To determine the specific rotation of the cane sugar solution using bi-quartz polarimeter.

Suggested Readings :

1. Practical Physics : Gosta Saxon (S.Chand & Company); Harman Singh & P.S. Heron (R.Chand & Co.)
2. A Text Book of Practical Physics: Indu Prakash, Ratanakrishna A.K.Jha, Kitab Mahal
3. Advanced level Physics Practicals: Michael Nelson and Jan M. Ogborn, Heinemann Educational Publishers
4. A Laboratory Manual of Physics for undergraduate classes: D.P.Khandwal, Vanu Pub.
5. Practical Physics: G.L. Squires, Cambridge University Press.
6. A Laboratory Manual of Physics - D.P.Khandwal.

SEMESTER - V

MCPHY09:

Basic Electronics

Course Title	Credit	Credit Distribution	
		Theory	Practical
Basic Electronics	5	3	2

Course Objectives

After the completion of the course, the student will be able to:

- CO1: Understand fundamental designing concepts of different types of Logic Gates, Minimization techniques etc.
- CO2: Design of different types of the Digital circuits, and to give the computational details for Digital Circuits.
- CO3: Draw characteristics of devices like PNP and NPN junction diode and truth tables of different logic gates.
- CO4: Understand basic elements and measurement of their values with multimeter and their characteristic study.
- CO5: Get background for further studies and research in different subject areas.

MCPHY09 Basic Electronics (T) - 3 Credit		
Unit	Topics to be covered	No. of Lectures
1	Digital Circuit: Difference between Analog & Digital Circuits, Binary Numbers, Decimal to Binary & vice-versa, AND, OR and NOT Gates/Realization using Diodes & Transistors, NAND and NOR Gates as Universal gates, XOR and XNOR Gates.	04
2	Basic Circuit Operations: De Morgan's Theorem, Boolean Laws, Simplification of Logic Circuit using Boolean Algebra, Fundamental Theorems, Minterms and Maxterms, Conversion of a Truth Table into an Equivalent Logic Circuit by (1) Sum of Products Method and (2) Karnaugh Map (For Advanced Learners). Combinational circuits: Basic idea of Binary Addition, Binary Subtraction using 2's Complement, Half and Full Adders, Half & Full Subtractors.	05
3	Semiconductor Devices: P-n-n-type semiconductors, Energy Level Diagram, Barrier Formation in PN Junction Diode, Qualitative Idea of Current Flow Mechanism in Forward and Reverse Biased Diode, P-N junction & its characteristics, Static and Dynamic Resistance, Principle and structure of (1) LEDs (2) Photodiode (3) Zener Diode (4) Solar Cell. Electronic Devices and their Applications: (1) Rectifier Diode: Half-wave Rectifier, Full-wave Rectifier (Centre-tapped and Bridge), Calculation of Ripple Factor and Rectification Efficiency. (2) Voltage	14

	<p>Regulation using Zener Diode.</p> <p>Bipolar Junction Transistors: p-n and p-n-p Transistors, Characteristics of CB, CE and CC Configurations. Current gain α and β parameters, Relations between α and β parameters. Load Line analysis of Transistors. DC Load Line and Q-point. Physical Mechanism of Current Flow: Active, Cutoff and Saturation Regions.</p> <p>Amplifiers: Transistor Biasing circuits and Stability. Fixed Bias and Voltage Divider Bias circuit for CE Amplifier. β-parameter Equivalent Circuit. Analysis of a single-stage CE amplifier using Hybrid Model. Input and Output Impedance. Current, Voltage and Power Gains. Class A, B & C Amplifiers (For Advanced Learners).</p>	
4	<p>Operational Amplifiers (Black Box approach): Characteristics of an ideal and Practical Op-Amp (IC 741), Open-loop Gain, CMRR, Concept of virtual ground. Applications of Op-Amp (1) Inverting and Non-inverting Amplifier (2) Adder (3) Subtractor (4) Differentiator (5) Integrator.</p> <p>Feedback and Oscillation: Effects of Positive and Negative Feedback on Gain and Stability, Distortion and Noise. Sinusoidal Oscillators: Barkhausen's Criterion for self-sustained oscillations. RC and Wien Bridge oscillators.</p>	08
5	<p>Instrumentations: Introduction to CRO: Block Diagram and Applications of CRO: (1) Study of Waveform (2) Measurement of Voltage, Current, Frequency and Phase Difference.</p> <p>Power Supply: Half Wave Rectifiers, Centre-tapped and Full wave Rectifiers, Calculation of Ripple Factor and Rectification Efficiency. Basic Idea about capacitor filter, Zener Diode and Voltage Regulation.</p> <p>Timer IC: IC 555 Pin diagram and its applications as Astable and Monostable Multivibrators.</p>	11
	TOTAL	45

MJCPHY09		Basic Electronics (P) - 2 Credit	
1.	To measure (a) Voltages and (b) Time period of a periodic waveform using CRO.		
2.	To test a Diode and Transistor using a Multimeter.		
3.	To design a switch (NOT gate) using a transistor.		
4.	To verify and design AND, OR, NOT and XOR gates using NAND gates.		
5.	Half Adder, Half Subtractor and 4-bit Binary Adder		
6.	To study V-I characteristics of P-N junction, Zener and Light emitting diode.		
7.	To study the characteristics of a Bipolar Junction Transistor in CE configuration.		
8.	To study the frequency response of voltage gain of a RC-coupled transistor amplifier.		
9.	To design inverting amplifier using Op-amp (741) and study its frequency response.		
10.	To design an Astable Multivibrator using IC 555 Timer.		
11.	To design a precision Differentiator using an Op-Amp 741.

Semester – VI

MJCPHY10: Analytical Mechanics & Special Theory of Relativity

Course Title	Credit	Credit Distribution	
		Theory	Practical
Analytical Mechanics & Special Theory of Relativity	4	4	0

Course Outcomes

After completion of the course, the students will be able to :

- CO1: Understand Physical Principle behind derivation of Lagrange and Hamiltonian Equation.
- CO2: Understand Canonical Transformation
- CO3: Analyse the Centre of mass and Laboratory frames of reference and their use in explaining elastic and inelastic collisions
- CO4: Understand the Planetary motions and motions of satellites using the principles of gravitation and Kepler's laws. Getting an idea of postulates of special theory of relativity and their implications.
- CO5: Get background for further studies and research in different subject areas.

MJCPHY10: Analytical Mechanics & Special Theory of Relativity (T) - 4 Credit		
Unit	Topics to be covered	No. of Lectures
1	<p>Constraints : Holonomic, Non Holonomic, Scleronomic, Rheonomous, D'Alembert's Principle, Virtual Displacement, Principle of virtual work, concept of generalized co-ordinates, Derivation of Lagrange's equation from D'Alembert's Principle, simple applications of Lagrange's equations.</p> <p>Variational Principle and Hamiltonian formalism: Calculus of variation and its applications, Hamilton's Principle, Derivation of Lagrange's equations of motion from Hamilton's Principle, Velocity-dependent potential, Cyclic coordinates, Symmetries and conservation laws, Legendre transformation, Hamilton's equations of motion and its applications, Principle of least action.</p>	15

2	Classical Transformation: Canonical transformation and its applications, Poisson Brackets, Jacobi Identity, Hamilton-Jacobi equation, Action-angle variables, Theory of small oscillations.	10
3	Motion of a Rigid body: Euler's Angle, Kinematics of rotation, Euler's equation of Motion, Twisting Torque on a Elastic Cylinder.	08
4	Special Theory of Relativity: Michelson-Morley Experiment and its outcome, Postulates of Special Theory of Relativity, Lorentz Transformations, Lorentz contraction, Time dilation, Relativistic addition of velocities, Variation of mass with velocity, Mass less Particles, Mass-energy Equivalence Four vectors.	13
TOTAL		45

Suggested Books :

1. An introduction to mechanics - Kleppner D., Kolenkow R. J. (McGraw-Hill)
2. Mechanics, Berkeley Physics, vol.1 - Kittel C., Knight W., et al. (Tata Mc Graw - Hill)
3. Physics - Resnick, Halliday and Walker, Wiley (I/c)
4. Cengage Learning - Fowles G. R. and Cassiday G.L...
5. Santhi M. Feynman Lectures, Vol. I - Feynman R. P., Leighton E. B. (Pearson Education)
6. Mechanics - Mather D. S., S.Chand (Company Limited)
7. Special Relativity - B.C. Rai
8. University Physics - Sears F. W, Zemansky M. W., Young H.D., 13/e (Addison Wesley)
9. Physics for scientists and Engineers with Modern Phys. - Jewettl. W., Serway R. A. (Cengage Learning)
10. Theoretical Mechanics - Spiegel M.R. (Tata McGraw Hill)
11. Special Theory of Relativity - S. Chand.
12. Relativity - Gupta & Kumar (Pragati Prakashan)

SEMESTER-VI**MJCPHY11:****Statistical Mechanics**

Course Title	Credit	Credit Distribution	
		Theory	Practical
Statistical Mechanics	5	5	0

Course Outcome

After the completion of the course, the student will be able to:

- CO1: Basic knowledge of thermodynamic systems.
- CO2: Understand the basic idea about statistical distributions.
- CO3: Impact the knowledge about the phase transitions and potentials.
- CO4: Understand the applications of statistical laws.
- CO6: Get background for further studies and research in different subject

MJCPHY11: Statistical Mechanics (T) - 5 Credit		
Unit	Topics to be covered	No. of Lectures
1	Classical Statistics Macrostate and Microstate, Phase Space, Elementary Concept of Ensemble, Entropy and Thermodynamic Probability, Maxwell-Boltzmann Distribution Law, Partition Function, Thermodynamic Functions of an ideal Gas, Classical Entropy Expansion, Gibbs Paradox, Sackur-Tetrode equation, Law of Equipartition of energy, its applications to Specific Heat and its Limitations.	15
2	Classical Theory of Radiation Black Body Radiation, Kirchhoff's law, Stefan-Boltzmann law (Thermodynamic proof), Radiation Pressure, Wien's Displacement Law, Wien's Distribution Law, Rayleigh-Jeans Formula, Rayleigh-Jeans's Law, Ultraviolet Catastrophe.	10
3	Quantum Theory of Radiation Spectral Distribution of Black Body Radiation, Planck's Quantum Postulates, Planck's Law of Blackbody Radiation: Experimental verification. Deduction of (1) Wien's Distribution Law (2) Rayleigh-Jeans Law, (3) Stefan-Boltzmann Law, (4) Wien's Displacement Law from Planck's Law.	10
4	Bose-Einstein Statistics Bose-Einstein distribution law, Thermodynamic functions of a strongly Degenerate Bose Gas, Bose Einstein condensation, Properties of liquid He (qualitative description), Radiation as a photon gas and Thermodynamic functions of photon gas. Bose derivation of Planck's law.	10

3	Angular Momentum Operator Orbital Angular momentum operator and its Commutation relation, Spin angular momentum operator and Pauli's spin matrices, Commutation relation of Pauli's spin matrices, ladder operator for total angular momentum operator and its Commutation relation, Spin-Orbit Coupling in atoms(L-S and J-J coupling), Zeeman Magnation	10
	TOTAL	45

MCQTYPE:	Quantum Mechanics & its Application (P) - 2 Credit
<ol style="list-style-type: none"> 1. Solve the Schrodinger equation for the ground state & the 1st excited state of Hydrogen atom. 2. Solve the Radial equation for an atom. 3. Estimate the Energy values of Linear harmonic oscillator with the given data. 4. Estimate the Energy values in Potential Well having defined width & depth. 5. Estimate the allowed Energy values of given Potential Barrier. 	

Suggested Readings :

1. Quantum Mechanics, Eugen Merzbacher, John Wiley and Sons, Inc.
2. Quantum Mechanics, G. P. Singh, (Pub: Bharati Bhawan)
3. Quantum Physics, H. C. Verma, (Pub: Surya Publication)
4. Introduction to Quantum Mechanics, David J. Griffiths, Pearson Education
5. Quantum Mechanics, Walter Greiner, Springer
6. Quantum Mechanics, Bruce Cameron Reed, Jones and Bartlett Learning.
7. A Text book of Quantum Mechanics, P. M. Mathews and K. Venkatesan, McGraw Hill.
8. Quantum Mechanics, Leonard I. Schiff, Tata McGraw Hill.
9. Principle of Quantum Mechanics, Ishwar Singh Tyagi, Pearson Publication.

SEMESTER – VIII

MJCPHY16: Physics of Laser and Molecules

Course Title	Credit	Credit Distribution	
		Theory	Practical
Physics of Laser and Molecules	4	3	1

Course Outcomes

After the completion of the course, the student will be able to:

CO1: To understand the working of LASER- Sources.

CO2: To understand the applications of different types of LASER in day to day life.

CO3: To understand the concept of formation of Molecules

CO4: To understand the mechanism of spin Raman Spectroscopy

CO5: To learn the working of Opto-electronic and Photonic devices

CO6: To enhance the employability in the field of optics

CO7: To explore research in the area of photonics

CO8: Get background for further studies and research in different subject

MJCPHY16: Physics of Laser and Molecules (T) - 3 Credit		
Unit	Topics to be covered	No. of Lectures
1	Basic Theory of LASER: Energy levels and process of Absorption and Emission, Einstein's Prediction, Difference between spontaneous and stimulated emission, Important features of stimulated emission, Einstein's A and B Co-efficient, Light Amplification condition for enhanced stimulated emission, population inversion and pumping method and atom laser (two level, three level and four level), Amplifier and Optical Resonator with threshold condition for Lasing.	12
2	Application of LASER in Holography, Concept of Temporal and Spatial Coherence, Principle method of generating and observing hologram, types of holograms. Application in consumer electronic industry (Barcode reader and its elements), in communication-basic principle and structure of optical fiber communication. Numerical aperture of fiber optic cables. In medical science, LASER diagnosis, LASER in ophthalmology and LASIK, LASER-surgery and LASER in Dermatology.	14
3	Concept of molecule, Basic idea of molecular bonding-ionic Non-Rigid rotator and covalent: formation of molecules, Morse potential energy curve, Molecule as oscillator, Concept of dissociation, wave function of H_2^+ Valence bond, Linear Combination of Atomic Orbitals (L.C.A.O.) concept.	10

RESEARCH METHODOLOGY FOR FACULTY OF SCIENCE

SEMESTER-VII: MAJOR COURSE-14 (MJC-14)

Credits: Theory-05

Full Marks:ESE-70 + CIA-30 = 100

Objective of the Course

- To introduce fundamental of research process including problem identification, hypothesis concept and to draw conclusion.

Learning outcome:

After completion of this course the students will be able to

- Develop the skill of contextualization of knowledge and critical thinking
- Choose appropriate methods of research aims and objectives.
- Apply ethical principle in research work.
- Understand the philosophy of research integrity and publication ethics.

MJC-XIV : Research Methodology (Credit: 5)		
Unit	Topics to be covered	No. of Hours (50)
1	Fundamental of Research	
	1.1 Philosophy, concept, aims, objectives, purpose and scope of research.	04
	1.2 Types of Research : Descriptive vs Analytical, Pure vs Applied, Conceptual vs Empirical, Qualitative vs Quantitative, Scientific vs Technical.	03
	1.3 Good Laboratory Practices and safety measures.	02
2	Concept of Research Problem and Research Designing	
	2.1 Identifying the Research Problem: meaning, importance, sources; selecting, stating and evaluating a research problem.	03
	2.2 Hypothesis: Designing and Testing	03
	2.3 Experimental Research and Design: Approximation of data, simulation and modelling.	02
	2.4 Sampling: Types of sampling, Questionnaire and observational methods of data collection.	03
